

Internet Security

/ Viatel WebControl

/ what is Viatel WebControl?

Time spent online by employees is rapidly increasing, and the Web now represents the primary attack vehicle for targeted malware. The rapid growth of spyware such as Trojan horses and adware, represents a shift in attacker's focus from the e-mail inbox to the Web browser.

Viatel's WebControl, a fully managed user-based service, protects organisations of all sizes against Web malware attacks and enables the safe, productive use of the web, without incurring upfront capital costs for hardware, or IT management costs.

Web Malware Scanning stops Web spyware and viruses at the Internet level, before they can infiltrate your network and compromise or disable your computers. Web Malware Scanning includes inbound and outbound detection of new and known malware threats, including malware communications.

WebControl uses proactive detection which employs reputation and behavior analysis utilising vast amounts of daily Web data. In addition, signature-based detection utilises multiple, industry-leading anti-malware engines with hourly and emergency signature updates, two-hour signature response times, and the largest global malware research laboratories and collection networks.

The Web Filtering service enables you to easily create, enforce, and monitor Web usage policies. It includes streamlined configuration through a graphical dashboard, real-time rules-based filters, and a best-in-class URL database. This allows you to create different access policies based on URL categories, content types, file types, schedules, and quotas to suit different areas of your organisation. You can also view comprehensive activity reporting including forensic auditing by user, department, and organisation.

Instant Messenger (IM) control enables you to control the rapidly growing use of public Instant Messaging, such as AOL, Yahoo!, and Windows Live, in corporate networks. With IM Control, you can control and standardise your IM network; monitor, log, and audit IM use and generate customisable scheduled reports; and access compliance logging that integrates with your organisation's e-mail archiving solutions.

/ what's in it for you?

Protect Confidential Data and Maintain Organisational Continuity

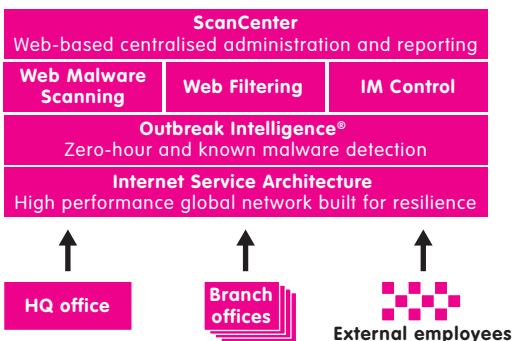

- Manage risk of malware-driven data theft
- Keep network and organisation running
- Stop up to 15% more malware compared to traditional signature-based security technologies

Ensure Productive, Compliant Working Environment

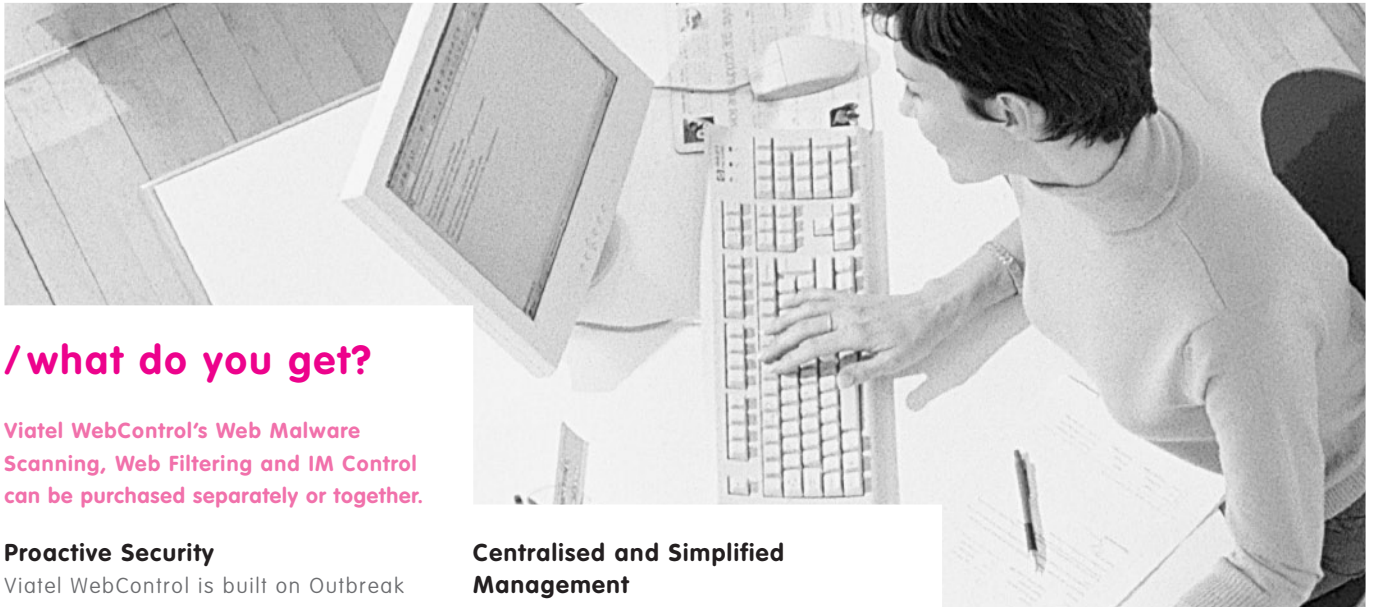

- Keep employees focused on the productive, compliant use of the Web and IM
- Educate employees to use the Web safely and responsibly
- Reduce violations of Web usage policies by up to 30%

Focus IT Resources on Projects Central to Organisations' Missions

- Minimise help desk costs from malware infections and Web usage policy violations
- Redeploy IT resources that traditionally would have to maintain multiple Web security point products (perhaps across multiple locations)
- Save up to 40% on total cost of ownership of traditional hardware/software model

Viatel WebControl – including Web malware scanning, URL filtering, and Instant Messaging control – is the only complete, best-in-class Web security solution available today. The ScanSafe platform scans billions of Web requests in real-time, stops millions of malware threats, and protects thousands of the most demanding organisations around the world.

/what do you get?

Viatel WebControl's Web Malware Scanning, Web Filtering and IM Control can be purchased separately or together.

Proactive Security

Viatel WebControl is built on Outbreak Intelligence (OI), a proprietary security platform that detects new and known malware threats. By leveraging its unique position at the Internet level and processing several terabytes of Web data each day, WebControl has unmatched visibility of global Web data, and is automated to proactively identify malware threats.

WebControl uses multiple signature-based anti-malware scan engines, multiple reputation and behavior detection engines, and automated machine-learning parameter development to detect new malware and avoid false positives.

This combination of multiple, correlated detection technologies, automated machine-learning heuristics, and the industry's largest Web data set makes WebControl the most effective solution against new Web malware attacks.

Real-Time Early Warning for Search

SearchAhead is a real-time early warning system that is included, at no additional charge, with Viatel WebControl's Web Filtering service. The SearchAhead service warns employees when malicious or inappropriate Web pages appear in their search results, thereby proactively enforcing your Web usage policies and keeping employees from visiting unwanted Web pages.

Centralised and Simplified Management

ScanCenter is Viatel's Web-based centralised administration and reporting console for the Web. It features real-time reporting of blocked malware and real-time policy enforcement. View Web security trends and data through at-a-glance graphical displays and detailed forensic audits. Manage granular policies for individuals and groups across a comprehensive range of URL categories, content types, and schedules

/why Viatel WebControl?

- **Protect your confidential information and computing resources**
- **Ensure a productive and compliant workplace**
- **Maintain a high performance Web experience for end users**
- **Save up to 40% from total cost of ownership**
- **Focus IT resources on your organisation's core mission**

/about us

Viatel is a pan-European business communications company operating across 6 European markets, including the UK, France and Germany. It has more than 10,000 business customers, providing them a range of business communication services that help companies of all sizes to access the Internet, connect their people and places, manage their web applications and increase the security of their data.
